Hiring Manager,  
Adani  
20 October 2024

I have a strong background in backend development, with experience in a variety of technologies and projects. I developed the backend for a YouTube clone, implementing user authentication, video management, and improving data retrieval speeds. I also worked on a job portal application, where I designed databases, built RESTful APIs, and managed files using Cloudinary. Additionally, I created a diamond price prediction model using Python and various libraries, achieving high accuracy and efficiency. My skills include C++, JavaScript, Git, Docker, and I hold certifications like AWS Cloud Practitioner. I've also participated in hackathons, gaining experience in team collaboration and problem-solving. I'm always eager to learn and tackle new challenges in backend development.
